My name is Tobias Österlin and I just graduated as an Application Developer at IT-Högskolan. Currently striving to build up my knowledge farther within primarily frontend development. As a person I am almost always positive and gladly tries to help if there are any issues. I also really like expanding my knowledge by learning new things I've never done before that will help me in the future. I recently started creating my own [portfolio](#).

## Work experience

### Internship, Hexa Studio (20 weeks, 2 periods)

Period 1: Created a calculator with React.js that calculated annuity loans per month when purchasing a car. The price changed depending on the car's price, current interest and installment period. After that me and another intern created wireframes for an app with Figma. When the design was done an employee set up a base project ground with some additional functions he had created for us in React Native.

Period 2: Permission to start over and try to build the basics of the app ourselves with React Native. While developing the app we also had a dedicated backend team that created endpoints for us, which we used locally with Docker. Git version control in BitBucket in both intern periods.

## Education

- **Application developer, IT Högskolan YR, Stockholm, Liljeholmen**

August 2020 - ~June 2022

### Education :

- Create, develop and troubleshoot applications with React Native and Expo in JavaScript and TypeScript. Also have some knowledge within android development with Kotlin and SwiftUI for iOS.
